Cells producing antibody compositions including antibody fragments and fusion proteins with Fc domain of antibody, useful for prevention or treatment of cancer, immune diseases, circulatory diseases and infections -

Claim 32; Page 4-11; 314pp; Japanese.

This invention relates to novel method for antibody production comprising a Chinese hemster ovarian tissue-originated (THO) cell transferred with a gene encoding an antibody molecule for producing a composition comprising an antibody molecule with an Fc domain bonded to the Nelyvoside linkage complex sugar chain. The produced antibody compositions are drugs for prevention or treatment of diseases accompanying tumour, allergy or inflammation, autoimmune diseases, circulatory diseases, and viral and bacterial infections. The antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety and reduced side effects when applied alone or in combination with other drugs for therapy. The present sequence represents a nucleotide molecule used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                               transferred with a gene encoding an antibody molecule for producing a composition comprising an antibody molecule with an Fc domain bonded to the Neglycoside linkage complex sugar chain. The produced antibody compositions are drugs for prevention or treatment of diseases accompanying tumour, allergy or inflammation, autoimmune diseases, antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety and reduced side effects when applied alone or in combination with other molecule used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AGAGAACTCTCCCAAGATTCTTGCAAAGCTGGAGCGCTTAAAACAACAAAATGAAGACTTG

The method of the invention is useful for the preparation of a glycoprotein having animal type sugar chain. The current sequence represents alphal, 6-fucosyl transferase cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GTAAATGACAAAAACATTCAAGTGGTCGAGCTCCCCATTGTAGACAGCCTCCATCCTCGG

AAT76573 and AAT76574 represent the coding sequences for the pig and human alpha 1-6 fucosyltransferases of the invention, respectively. The encoded enzyme transfers fucose from guanosine diphosphate to the 6-hydroxyl group of the GloNac nearest to R in the receptor molecule: GlcNacbeta 1-Manalpha 1-5) Manbeta 1-4GlCNAccheta 1-ZManalpha 1-5) Manbeta 1-4GlCNAccheta 1-ZManalpha 1-6) GlcNacbeta 1-2Manalpha 1-6) GlcNacbeta 1-4(Fucalpha 1-6) GlcNacbeta 1-2Manalpha 1-6) GlcNacbeta 1-6 GlcNacbeta 1-2Manalpha 1-6) GlcNacbeta 1-6 G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121 AGAGAACTCTCCAAGATTCTTGCAAAGCTTGAACGCTTAAAACAGCAAAATGAAGACTTG 180

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) assessing the prostate cell carcinogenic potential of a compound;
(f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a patient;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule (I) common a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           marker.

The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell coxpressing the proteins. N and P can be used in the prevention, diagnosis and AAB77789 represent sequences used in the exemplification of the

human alpha 1-6 fucosyltransferases of the invention, respectively. The concoded enzyme transferases of the invention, respectively. The encoded enzyme transfers fucose from ganosine diphosphate to the concoded enzyme transfers fucose from ganosine diphosphate to the concoded enzyme transfers fucose from ganosine diphosphate to the concoded enzyme transfers fucose from ganosine diphosphate to the concoded enzyme the GICNAcher at 1-2 manalpha 1-3) Manbeta 1-4 dicNAcher at 0 give (GICNAchera 1-3) Manbeta 1-4 dicNAchera 1-4 (Fucalpha 1-3) Manbeta 1-3) Manbeta 1-3 manbeta 1-4 dicNAchera 1-4 (Fucalpha 1-6) GICNAcher. It has an optimum pH of about 7.0 (pig) or 7.5 (human), and is stable over the copymenture of the enzyme is 30-37 degrees C. A bivalent metal is not required for activity of the enzyme, and the enzyme is not inhibited in complete the presence of 5 mM EDTA. The enzyme is useful in the synthesis and modification of sugar chains, and as antigen for the production of antibodies recognishing the enzyme. The antibodies can be used for the concoded enzyme. The antibodies can be used for the concoded enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GGAAGAGTCCGTGTTTTAGAAGAACAGCTTGTTAAGGCCCAAAGAACAGATTGAAAATTAC 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Immunologically functional molecule, immune system; immunomodulation; glycosylation; fucose; N-acetylglucosamine; cancer; circulatory disease; viral infection; bacterial infection; allergy; autoimmune disease; inflammation; antibody; rat; FUT8; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for controlling the activity of an immunologically functional molecule (e.g., an antibody) where the control is effected by the presence or absence of fucose bound to an N-acetylglucosamine residue at the reducing end of the sugar chain on the immunologically functional molecule. The invention also relates to methods for the diagnosis, prevention or treatment of diseases which involve the modified immunologically functional molecule, and agents which stimulate the activity of an immunologically functional molecule. The methods of the invention are used for the diagnosis, treatment and prevention of a broad range of diseases including cancer, circulatory disease, viral or bacterial infection, allergy, autoimmune disease and inflammation. The present sequence represents a rat FUT8 cDNA isolated in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Control of activity of antibodies and other immunologically functional molecules by addition or removal of fucose from sugar chain for diagnosis and treatment of cancer, allergy and other diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to novel method for antibody production comprising a Chinese hamster ovarian tissue-originated (GHO) cell transferred with a gene encoding an antibody molecule for producing a composition comprising an antibody molecule with an Fc domain bonded to the N-glycoside linkage complex sugar chain. The produced antibody compositions are drugs for prevention or treatment of diseases accompanying tumour, allergy or inflammation, autoimmune diseases, circulatory diseases, and viral and bacterial infections. The antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety and reduced side effects when applied alone or in combination with other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        780 ACCTGTAAGTGAGACATGTACAGACAGATCTGGCCTCTCCACTGGACACTGGTCAGGTGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for controlling the activity of an immunologically functional molecule (e.g., an antibody) where the control is effected by the presence or absence of fucose bound to an N-acetylglucosamine residue at the reducing end of the sugar chain on the immunologically functional molecule. The invention also relates to methods for the diagnosis, prevention or treatment of diseases which involve the modified immunologically functional molecule, and agents which stimulate the activity of an immunologically functional molecule. The methods of the invention are used for the diagnosis, treatment and prevention of a broad range of diseases including cancer, circulatory disease, viral or bacterial infection, allergy, autoimmune disease and inflammation. The present sequence represents a Chinese hamster FUTB CDNA isolated in an exemplification of the invention.
                                                                                                                                                                                     Control of activity of antibodies and other immunologically functional molecules by addition or removal of fucose from sugar chain for diagnosis and treatment of cancer, allergy and other diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TTGGCTGGAAAGGGAAATAGAAGAAACCACCAAGAAGCTTGGCTTCAAACATCCAGTTAT
